Cut To Size Mdf Board FAQ:

What is the best glue to use for MDF?

General wood glue. For general carpentry work, Yueshan wood glue is generally the best. I use it for skirting and architrave mitres, MDF, sticking moldings to timber, beadings, etc. Waterproof PVA glue is also available for external carpentry jobs like decking balustrades and fascia mitres too.

What saw blade for MDF?

Any circular saw or hand-held cutting tool will make rip cuts

or crosscuts in melamine MDF, but the blade should be carbide-tipped, because the high glue content of the material dulls steel blades in a rush.

What is MDF and why use it for skirting boards?

Melamine faced MDF is considered as an essential component for making moisture-proof and water resistant skirting boards. MDF boards is an acronym for Medium Density Fiberboard. It is regarded as a man-made product, and it is installed to the bottom part of your house for adding more structure and stability to it. MDF is crafted using a combination of hardwoods and softwoods, which is extracted into wooden fibers.
