## **Is plywood strong or not?**

Plywood may be the most powerful of building materials. Strength is the effect of a single layer of very grains placed vertically with respect to one another with glue glued under ruthlessly throughout the manufacturing process. Other qualities that may use a stronger solution from the plywood are the types, type and thickness from the glue.

## **Plywood cutting service supplier- Yueshan**

Yueshan was founded in 1999 with the only goal of supplying high quality melamine plywood board to the cabinet furniture industry. Since that time the company products have expanded a full range of melamine MDF, melamine particle board and melamine laminated plywood and also offer melamine plywood board CNC cutting service to customer.

Yueshan now has more than 120,000 m<sup>2</sup> of factory area across four sites, they are respectively in Foshan, Guangzhou, Dongguan, Shenyang. It means that Yueshan will continue to invest the latest production technology coupled with our integrated IT system to ensure a smooth process from your order being delivered to your home. To offering high quality products in short times for customer. All of this goes towards our ultimate goal, 'to be the best supplier in the furniture industry'
