White Laminated Melamine Shelves

Advance technology of White Melamine Laminate Shelving Boards supplier

(1) To be able to provide more needs of customers, Yueshan uses advanced technology to produce melamine laminate shelving boards in recent years. Combining melamine board surface with a number of melamine paper colors like white, light gray, dark gray to all wood colors such as Oak, Ash, Maple-Beech, Acacia, Teak Walnut, Camphor, Cherry, Red, yellow, Red, Antique - All looks like real wood and the price is reasonable. Most of the customer would like to use white melamine laminate shelving boards used for the kitchen cabinet, furniture and wardrobe, etc. Especially this kind of plywood made of water-resistant core, is not warped, lying color or cracking, not like as other low quality industrial wood which is the top quality furniture we produce for our customer.

(2) Yueshan focus on wood surface finished and wood panels up to tens of years, and even more than 20 years. So we are confident offering the top quality melamine board and best service for the customer.

Melamine Shelves Board Packaging Methods

All our plywood shipments are filled with plywood or cardboard sheet. In the plywood or cardboard is a layer of plastic film which can protect the plywood from humid in the containers.

Wooden retail shelving boards selection tips:

1, Solid wood plugboard: solid wood splice the board in the case of without considering cost belongs to better plate, there is more common oak plugboard, northeast China ash plugboard, and elm plugboard and so on six of seven kinds of plank, in environmental protection point of view, only requires plugboard splicing place with a bit of glue, carpentry board density board than glue is compared with the least, so it is relatively the most environmentally friendly.

2. Particleboard: this kind of board is made of broken materials such as tree branches and wood chips, with a large amounts of glue and low cost. But the intensity is not big, contain formaldehyde amount tall, do not use this kind of plank as considerably as possible when chest.

3, MDF board: density board is lumber, after the bubble such as the branch is in water for a period of time, break press and become, it is with wood fiber or other plant add glue to be close for raw material and become, press density to differ, cent is tall, medium, low a few kinds. This kind of strength is big, resistant to impact, easy to process, so it is also widely used.

5. Fir board: glulam is an emerging solid wood material, which is made of large-diameter logs and deeply processed into interlocking splicing boards like fingers. Glulam can be directly colored and painted, which saves a process compared with the joinery board.

6, Melamine panel: it is all solid wood ecological paint-free board, with good stability, strong anti-deformation ability, and nail grip ability. The main environmental protection level is very high, reaching the European E0 standard, and the formaldehyde emission amount is less than 0.5.

7, Fire prevention board: it is to use silicon qualitative material or calcareous material to be main raw material, mix with the fiber material of certain scale, lightweight aggregate, adhesive and chemical additive, the adornment board that via autoclaved pressure technology makes, ply is 0.6 -- 1.2mm commonly; Fire prevention board compares effect economy, and intensity is tall, fireproof, moisture proof. Fire prevention board basically is used at Ambry, show ark to wait.
